

SoleSight

THE AI HYPE INDEX
FOR SNEAKERS

jairaj1111.github.io/solesight

Hype, quantified by AI.

SoleSight watches 90 sneakers across 12 brands and answers one question, every night, with no human in the loop: how much does the market want each shoe right now? Live signals in, one explainable 0–100 Hype Score out — published to a public index with every number traceable to its source.

What it does

- **Hype Score 0–100**
Weighted blend of five signals; weights renormalize over whatever is present. Fully explainable — the site recomputes today's #1 in front of you.
- **Proven to predict**
Backtested across 15,900+ historical checks: rising-flagged shoes held their gain 30 days later 72% of the time vs a 43% base rate — a +29-point edge.
- **Launch Radar + Discovery**
Detects demand spikes (3x+ baseline) and surfaces hyped shoes not yet tracked, straight from the press feeds — the index nominates its own next entries.
- **Ask SoleSight**
An agentic analyst: Claude answers free-form questions by querying the index's data tools; a deterministic engine serves everyone else, keyless.

How it runs — every night, unattended

The pipeline commits its data back to the repo — the commit history is a daily, public heartbeat.
